

Total area of facade=
2600 m²
= 162 panels.
20% of these panels have
direct sunlight and poten-
tial for solar power gain.
Passive and active.

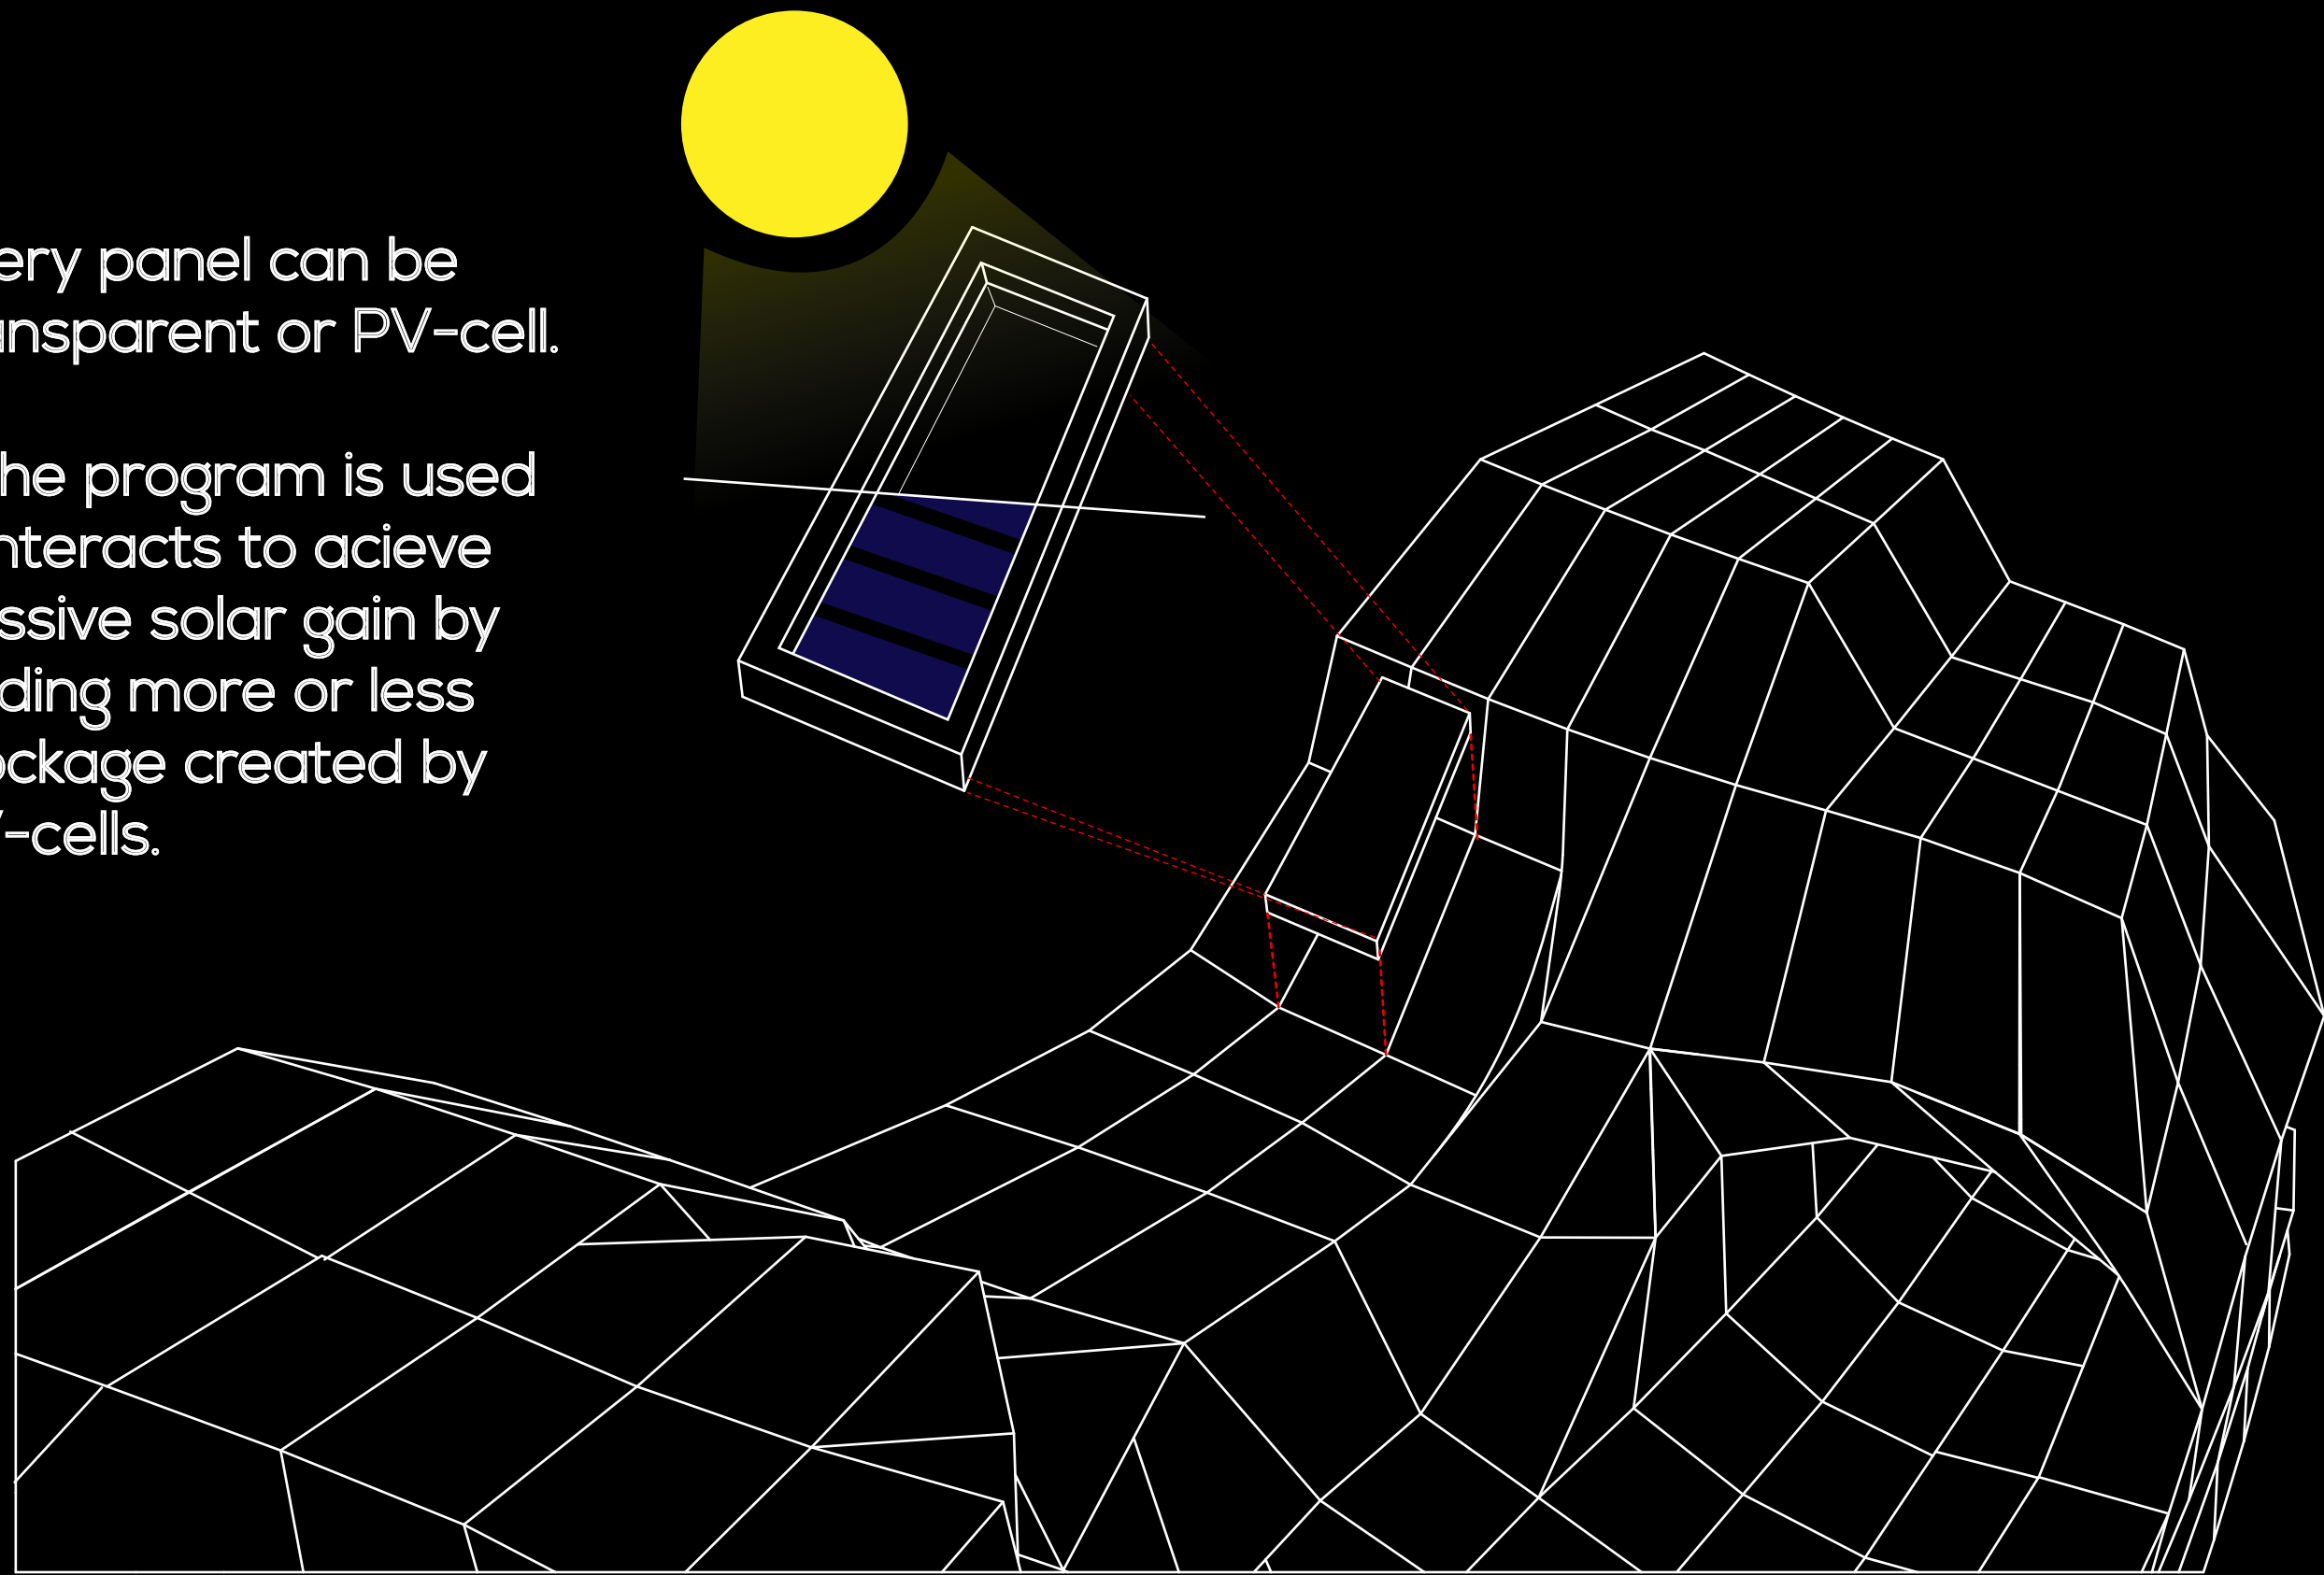

= 520m² panel

Climate:
Singel panel // smart panel

Every panel can be transparent or PV-cell.

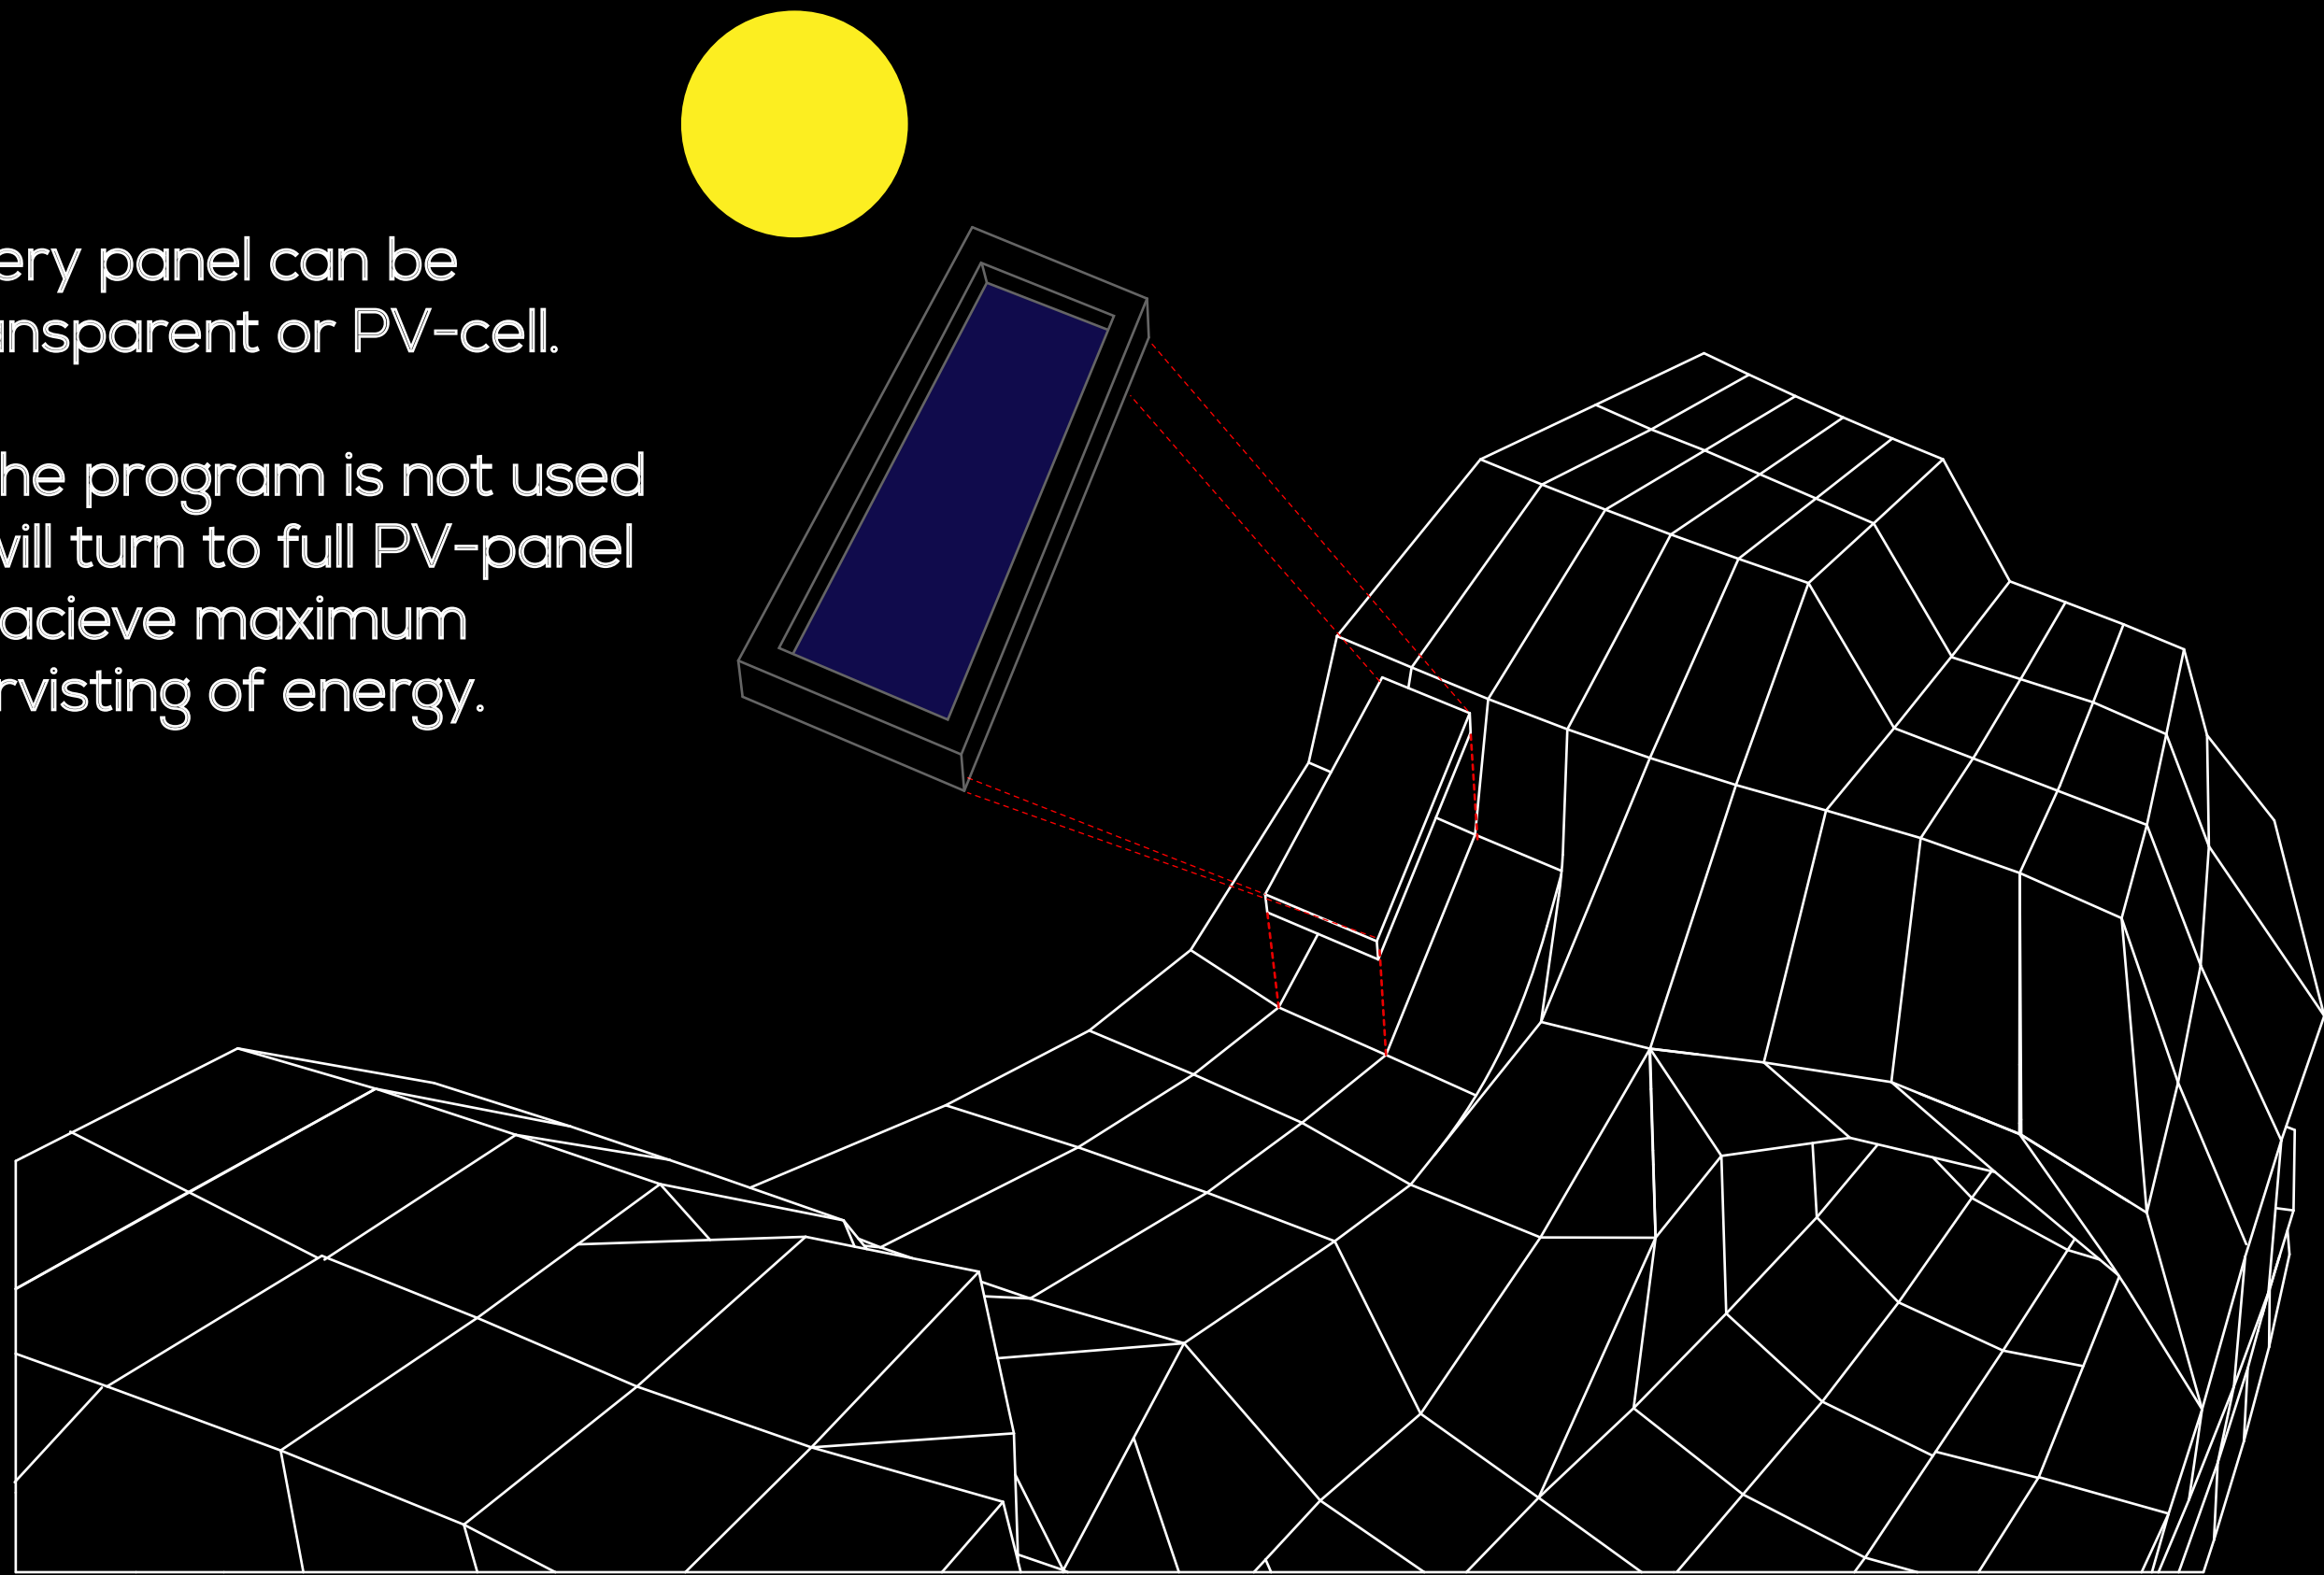

If the program is used it interacts to achieve passive solar gain by adding more or less blockage created by PV-cells.

Climate:
Single panel // smart panel

Every panel can be
transparent or PV-cell.

If the program is not used
it will turn to full PV-panel
to achieve maximum
harvesting of energy.

Climate:
Single panel // smart panel
